ABOUT THE McCOMBS SCHOOL OF BUSINESS AT THE UNIVERSITY OF TEXAS AT AUSTIN

A highly ranked, world-renowned institution at the intersection of innovation, research, and leadership, the McCombs School of Business offers transformative business education designed to equip professionals for real-world impact. Through groundbreaking research and discovery, the school helps leaders prepare for tomorrow's opportunities. Technology programs from the McCombs School of Business are grounded in the University's ongoing research on applying technology and Data Science to pressing business challenges across industries.

PROGRAM WITH AN **UNMATCHED** CURRICULUM THAT HELPS YOU BUILD, DEPLOY, AND SCALE AI

According to McKinsey & Company, nearly two-thirds of enterprises worldwide have experimented with AI agents, but fewer than 10 percent have scaled them to deliver tangible value. Scaling AI requires more than access to tools; it demands a strong understanding of Machine Learning models, robust data systems, and the strategic judgment needed to design well-governed, production-ready AI workflows.

The 23-week online **Post Graduate Program in Artificial Intelligence and Machine Learning: Business Applications** from the McCombs School of Business at The University of Texas at Austin features an **unmatched, comprehensive, hands-on curriculum**. The program covers the full spectrum of AI and Machine Learning, from

foundational concepts to **new-age AI** such as **Generative AI** and **Agentic AI**.

With a structured learning experience, this program brings together **learning from experts** and **learning by doing**, critical to developing the **intuition** and **strategic judgment** needed to build and deploy AI at scale. A certificate from Texas McCombs serves as a formal recognition of the rigorous learning and technical expertise developed through the program.

Designed for domain experts seeking to lead AI transformation within their organizations, as well as professionals looking to transition into high-growth AI and ML careers, the program builds both strategic understanding and applied technical proficiency.

PROGRAM HIGHLIGHTS

Duration

23 Weeks

Format

Delivered online, featuring recorded video lectures, monthly live masterclasses by Texas McCombs faculty, and interactive mentorship sessions with global industry experts.

Hands-On Learning

Build practical expertise through 4 hands-on projects and 30+ real-world case studies designed to strengthen applied learning across industry scenarios.

Learning Support

Receive personalized assistance from a dedicated Program Manager and academic support through the Great Learning community, GLAIDE, project discussion forums, and peer groups.

Shareable e-Portfolio

Build an industry-ready portfolio to showcase skills and tool proficiency.

Personalized Feedback

Benefit from structured evaluation and personalized feedback on all submitted projects to strengthen practical understanding and performance.

Claude-Based AI Workflows Module

Build practical capability in applying Generative and Agentic AI using Claude across real-world workflows.

Career Support and Services

Access comprehensive career support, including an AI-assisted resume builder, unlimited AI-assisted mock interviews, career preparation materials, and two career mentoring sessions.

Recognized Credentials

Earn Continuing Education Units (CEUs) and a globally recognized Certificate of Completion from the McCombs School of Business at The University of Texas at Austin upon program completion.

EARN A CERTIFICATE OF COMPLETION FROM TEXAS McCOMBS

The image is for illustrative purposes only. The actual certificate may be subject to change at the discretion of Texas McCombs.

WHO IS THIS PROGRAM FOR?

Business leaders and functional heads with deep domain expertise seeking to deploy scalable AI systems or lead teams building them.

Professionals in tech adjacent roles who want to build a strong foundation in AI to successfully transition into a high-growth AI and Machine Learning career.

Tech practitioners and technical leaders who want to strengthen their ability to build and deploy AI-powered solutions.

LEARNING OUTCOMES

Develop a strong conceptual and technical foundation, spanning core Machine Learning and neural networks to modern Generative and Agentic AI architectures.

Design context-aware single-agent and multi-agent systems by integrating memory and specialized tools, enabling agents to execute multi-step workflows and automate complex processes.

Apply and evaluate Large Language Models (LLMs) and Prompt Engineering techniques to generate reliable outputs, optimize performance, and ensure prompt stability.

Gain hands-on expertise in Python and Machine Learning to build, evaluate, and deploy predictive and generative models that solve real-world problems.

Implement and evaluate Retrieval-Augmented Generation (RAG) systems by leveraging embeddings, vector databases, and external knowledge sources to enhance accuracy, contextual relevance, and business productivity.

Implement rigorous evaluation methods to build reliable and transparent AI-powered solutions that meet business requirements.

STRUCTURED LEARNING IN THE AGE OF AI

Today, the technical knowledge barriers to learning and using AI have diminished greatly. However, barriers of a different kind that impact its successful implementation have emerged, those involving **human intuition and strategic judgment**. To consistently get the best from any AI tool and drive business impact, one must understand the fundamentals of the underlying technology.

Our structured approach combines **learning from experts** who have created the curriculum and **learning by doing** through hands-on work using the latest tools and technologies. Together, these ensure a well-rounded learning experience. **The university credential** provides formal validation of your expertise, a valuable differentiator in a world where everyone claims to be proficient in AI.

A STRUCTURED LEARNING APPROACH TO BUILDING REAL-WORLD AI CAPABILITY

LEARN FROM EXPERTS

Build a strong foundation and the judgment needed to critically evaluate AI outputs as tools evolve.

Structured curriculum designed by leading Texas McCombs faculty

Recorded video lectures and monthly webinars from Texas McCombs faculty

15+ live mentorship sessions with industry experts

LEARN BY DOING

Build a portfolio of real-world projects that demonstrates expertise in the latest tools and technologies.

4 hands-on projects

30+ case studies

30+ tools and technologies

EARN A UNIVERSITY CREDENTIAL

Get recognized by a renowned university that formally validates your expertise through rigorous assessments.

Texas McCombs is ranked #7 among public universities in the US

Certificate of Completion from Texas McCombs

Continuing Education Units (CEUs)

PROGRAM STRUCTURE

23-WEEK PROGRAM

WEEKS	MODULE	TOPICS
1 WEEK	Preparatory Module	• Introduction to the World of Data and AI • Python Programming Fundamentals • The Generative AI and Agentic AI Landscape
2 WEEKS	Python for AI Solutions	• Python Programming With Generative AI • Data Manipulation and Exploratory Data Analysis
5 WEEKS	Predictive Modeling with Machine Learning and Neural Networks	• Linear Regression • Decision Trees • K-Means Clustering • Ensemble Techniques • Neural Networks
1 WEEK	LEARNING BREAK	
1 WEEK	HANDS-ON PROJECT	
4 WEEKS	Generative AI for Natural Language Processing	• Large Language Models and Prompt Engineering • Evaluating Generative AI Workflows • Retrieval-Augmented Generation • Responsible AI
1 WEEK	HANDS-ON PROJECT	
1 WEEK	LEARNING BREAK	
3 WEEKS	Agentic AI for Automation	• Single-Agent Systems • Multi-Agent Systems • Evaluating Agentic AI Systems
1 WEEK	HANDS-ON PROJECT	
2 WEEKS	Deploying AI Solutions	• ML Model Deployment • Deploying GenAI Solutions
1 WEEK	HANDS-ON PROJECT	
	SELF-PACED	• Claude-Based AI Workflows • Masterclass Multimodal Generative AI • Neural Networks for Computer Vision • Statistical Learning • Recommendation Systems • Introduction to SQL

PROGRAM CURRICULUM

PRE-WORK MODULE

This foundational module introduces core concepts in data and AI, along with an overview of how AI-driven solutions are applied across industry use cases. It also builds essential programming fundamentals and familiarizes learners with the tools and concepts required for Generative AI and Agentic AI applications.

- **Introduction to the World of Data and AI • Python Programming Fundamentals**
- **The Generative AI and Agentic AI Landscape**

MODULE 01

PYTHON FOR AI SOLUTIONS

This module develops foundational Python skills for AI applications, focusing on data manipulation, exploratory data analysis, and building data-driven workflows. It also empowers learners to judiciously use AI-assisted coding to support analysis and insight generation.

- **Python Programming With Generative AI • Data Manipulation and Exploratory Data Analysis**

MODULE 02

PREDICTIVE MODELING WITH MACHINE LEARNING AND NEURAL NETWORKS

This module develops a strong understanding of learning from data through linear and non-linear models, including tree-based and ensemble methods, to capture relationships between variables and improve predictive performance. The module also covers neural networks for modeling complex data and generating robust predictions.

- **Linear Regression • Decision Trees • K-Means Clustering • Ensemble Techniques • Neural Networks**

LEARNING BREAK WEEK

PROJECT WEEK

MODULE 03

GENERATIVE AI FOR NATURAL LANGUAGE PROCESSING

This module introduces the foundations of Generative AI for natural language processing, with a focus on Large Language Models (LLMs) and their practical applications. Learners will develop Prompt Engineering skills, build retrieval-augmented generation (RAG) pipelines, and evaluate Generative AI workflows for performance and reliability. The module also covers responsible AI principles to ensure safe and effective usage of language models.

- **Large Language Models and Prompt Engineering • Evaluating Generative AI Workflows**
- **Retrieval-Augmented Generation • Responsible AI**

PROJECT WEEK

LEARNING BREAK WEEK

MODULE 04

AGENTIC AI FOR AUTOMATION

This module focuses on the design and implementation of Agentic AI systems for automating complex tasks. Learners will build single-agent and multi-agent systems, integrating reasoning, memory, and tools to execute multi-step workflows. The module also covers evaluation techniques, including human oversight, to assess the performance, reliability, and effectiveness of Agentic AI systems.

• **Single-Agent Systems** • **Multi-Agent Systems** • **Evaluating Agentic AI Systems**

PROJECT WEEK

MODULE 05

DEPLOYING AI SOLUTIONS

This module focuses on deploying Machine Learning and Generative AI solutions into production environments. Learners will gain an understanding of deployment workflows, including integrating models into web applications and ensuring portability and performance in real-world settings.

• **ML Model Deployment** • **Deploying GenAI Solutions**

PROJECT WEEK

SELF-PACED MODULES

The following asynchronous modules are designed to provide learners with the flexibility to progress through the program at their own pace. Learners will gain access to structured, on-demand content that enables them to engage with core concepts anytime while balancing professional commitments and applying their learning in real-world contexts.

Self-Paced Module | Claude-Based AI Workflows

This module is designed to build practical capability in applying Generative AI and Agentic AI using the Claude ecosystem in real-world contexts. Learners build the ability to design, execute, and evaluate AI-driven workflows for real-world applications, supported by ~5 hours of structured learning.

Design and Execute AI Workflows

- Model selection and prompt engineering using **Claude Chat**
- Agentic workflow design and orchestration using **Claude CoWork**
- Plan > Approve > Execute > Iterate framework
- Designing workflows with reasoning, tools, and multi-step execution
- Applying concepts through real-world case studies

Build and Deploy AI Systems at Scale

- API integration and model usage using **Claude Code**
- Tool integration using the Model Context Protocol
- Designing agentic systems with memory, tools, and orchestration
- Performance optimisation, cost considerations, and system reliability
- Responsible AI principles, including alignment approaches such as Constitutional AI

*Disclaimer: Claude API access is not included as part of the program. Learners may explore advanced usage independently.

Self-Paced Masterclass | Multimodal Generative AI

This self-paced masterclass introduces the capabilities of multimodal Generative AI across text, image, and audio modalities. Learners will explore how GenAI tools can be applied to real-world use cases, including image generation and speech recognition, to solve business problems and enhance applications.

- **Image Creation using GenAI • Speech Recognition using GenAI**

Neural Networks for Computer Vision

This module introduces the world of computer vision, demonstrates an understanding of image processing and methods for extracting informative features from images, and builds convolutional neural networks (CNNs) to uncover hidden patterns in image data and solve image classification problems.

- **Overview of Computer Vision • Image Processing • Convolutional Neural Networks**

Statistical Learning

This module helps learners perform statistical analysis using Python to evaluate the reliability of a particular business estimate using confidence intervals and to test hypotheses (assumptions) before putting them into action and committing resources, by analyzing data distributions and performing hypothesis testing.

- Probability Fundamentals • Probability Distributions • Sampling and Central Limit Theorem
- Estimation Theory • Hypothesis Testing

Recommendation Systems

This module introduces recommendation systems and helps learners learn how to build recommendation systems that use past product purchase and satisfaction data to make high-quality personalized recommendations.

- Introduction to Recommendation Systems • Popularity-based and Content-based Recommendation Systems • Collaborative Filtering • Hybrid Recommendation Systems

Introduction to SQL

This module helps learners gain an understanding of the core concepts of databases and SQL, gain practical experience writing simple SQL queries to filter, manipulate, and retrieve data from relational databases, and utilize complex SQL queries with joins, window functions, and subqueries for data extraction and manipulation to solve real-world data problems and extract actionable business insights.

- Introduction to DB and SQL • Fetching, Filtering, and Aggregating Data • Inbuilt and Window Functions
- Joins and Subqueries

SAMPLE PROJECTS

01. ENERGY

Wind Energy Equipment Failure Prediction

Analyze data from a wind energy provider regarding equipment health, and build various neural network models to identify potential failures. This will allow for timely repairs before equipment breaks down, reducing overall maintenance costs.

Tools and Concepts:

- Exploratory Data Analysis • Data Preprocessing • Scikit-Learn • TensorFlow • Keras
- Artificial Neural Networks • Regularization

02. FINANCE

Financial Report Insight Assistant

Help financial analysts of an organization extract key information from lengthy financial documents, such as annual reports, by effectively leveraging Retrieval-Augmented Generation (RAG). This improves efficiency in making key financial decisions.

Tools and Concepts:

- Generative AI • Large Language Models • Prompt Engineering • Hugging Face
- Retrieval-Augmented Generation • Vector Databases • OpenAI API

03. OPERATIONS

AI-powered Last-Mile Delivery Exception Handling Automation

Improve last-mile logistics efficiency by implementing a multi-agent AI system that detects delivery exceptions from operational logs, applies policy-based reasoning to determine optimal resolution actions, generates personalized customer communications, and escalates complex cases while maintaining full auditability.

Tools and Concepts:

- LangGraph • LangChain • LangSmith • Multi-agent Systems • OpenAI API • Human-in-the-Loop Evaluation • AI-Powered Automation

04. ENERGY

AI-Powered Energy Intelligence

Build and deploy a RAG-based energy intelligence assistant that analyzes technical IEA reports to deliver fast, accurate, and fully cited cross-sector market insights, enabling investment teams to make timely, data-driven energy portfolio decisions.

Tools and Concepts:

- Generative AI • Large Language Models • Retrieval-Augmented Generation • Vector Databases
- AI-Driven Decision Support • OpenAI API

SAMPLE CASE STUDIES

RETAIL

Retail Order Query Chatbot

Enable dynamic, context-aware interactions that assist customers with product queries and order tracking by developing a retail chatbot using a multi-agent system, improving the overall shopping experience.

Tools and Concepts:

- LangGraph • LangChain • LangSmith • Multi-agent System • OpenAI API • Agentic AI
- Chatbot Development • Python

FINANCE

Data-Driven Insights for Credit Card Eligibility

Analyze data provided by a consulting firm partnering with banks, address key questions, draw actionable insights, and support the company in improving business by identifying customer attributes associated with credit card eligibility.

Tools and Concepts:

- Exploratory Data Analysis • Data Visualization • Pandas • Seaborn

TRANSPORTATION

Ride-Sharing Demand Analysis

Analyze ride-sharing data to identify patterns in demand across time and location, and generate actionable insights to optimize operations, improve resource allocation, and drive business growth.

Tools and Concepts:

- Python • Google Colab • Pandas • Seaborn • Gemini • ChatGPT

FINANCE

Credit Card Fraud Detection

Analyze credit card transaction data and build a neural network model to capture complex patterns and predict the probability of fraudulent transactions, illustrating how potential financial losses for both the institution and cardholders can be minimized.

Tools and Concepts:

- Exploratory Data Analysis • Neural Networks • TensorFlow

INSURANCE

Insurance Premium Prediction

Analyze customer and policy data to identify key factors influencing insurance costs, and build a predictive model to estimate premiums, enabling more accurate pricing and risk assessment.

Tools and Concepts:

• Python • Google Colab • Pandas • Seaborn • Sklearn • Gemini • ChatGPT

MANUFACTURING

Predictive Maintenance for Machine Health

Analyze equipment data from a manufacturing setup to identify patterns leading to machine failures, build a predictive model to detect potential breakdowns, and generate insights to optimize maintenance and reduce operational costs.

Tools and Concepts:

• Python • Google Colab • Pandas • Seaborn • Sklearn • Gemini • ChatGPT

TRANSPORTATION

Shared Bike Demand Prediction

Analyze customer and usage data from a bike-sharing system to identify demand patterns and build a predictive model to forecast bike usage, enabling better planning for peak hours and resource allocation.

Tools and Concepts:

• Python • Google Colab • Pandas • Seaborn • Sklearn • Gemini • ChatGPT

CUSTOMER SUPPORT

Intelligent Support Ticket Categorization

Leverage NLP and Generative AI techniques to classify support tickets, extract key issues, and prioritize them using sentiment signals, enabling faster response times and improved customer support efficiency.

Tools and Concepts:

• Python • Google Colab • OpenAI APIs • Hugging Face

FINANCE

Stock News Sentiment Analysis

Analyze financial news and market data to build an AI-driven system that extracts sentiment from news articles and generates summarized insights, enabling analysts to make more informed investment decisions.

Tools and Concepts:

• Python • Google Colab • OpenAI APIs • Hugging Face • DSPy

HEALTHCARE

Clinical Decision Support Assistant

Build a retrieval-augmented AI system that accesses trusted medical knowledge to answer clinical queries and support evidence-based decision-making, improving diagnostic efficiency and treatment outcomes.

Tools and Concepts:

• Python • Google Colab • Hugging Face • LangChain • ChromaDB • Sentence Transformers

TELECOMMUNICATIONS

AI-Powered Telecom Policy Assistant

Build an AI-powered assistant that leverages natural language queries and retrieval from policy documents to deliver accurate, compliant responses on plans, data limits, roaming, and refunds.

Tools and Concepts:

• Python • Google Colab • LlamaGuard • OpenAI API

FINANCE

Reimbursement Automation

Leverage AI to extract key information from receipts, categorize expenses, and validate reimbursement requests against policy guidelines, improving accuracy and streamlining financial operations.

Tools and Concepts:

• LangGraph • LangChain • Single-agent System • MCP • OpenAI API

CUSTOMER SUPPORT

AI Helpdesk Copilot

Implement an Agentic AI system to classify support tickets, retrieve relevant knowledge, and generate grounded, policy-compliant responses with explainable reasoning and automated escalation.

Tools and Concepts:

• LangGraph • LangChain • LangSmith • Multi-agent System • OpenAI API

LOGISTICS

AI-Powered Shipment Disruption Router

Implement a multi-agent AI system to analyze shipment disruptions, retrieve policy-based mitigation rules, and generate validated routing decisions with escalation for high-risk scenarios, ensuring operational efficiency and auditability.

Tools and Concepts:

• LangGraph • LangChain • LangSmith • Multi-agent System • OpenAI API
• Human-in-the-Loop Evaluation

HOSPITALITY

Rental Price Prediction for Short-Term Stays

Analyze listing and demand data from a short-term rental platform to build and deploy a Machine Learning model for dynamic pricing, enabling optimized pricing strategies and improved revenue management.

Tools and Concepts:

• Python • Google Colab • Scikit-Learn • Streamlit • Hugging Face

EDUCATION

LLM-Powered Research Paper Assistant

Implement and deploy a retrieval-augmented AI system to enable natural language querying of research papers, retrieve relevant content, and generate grounded responses to accelerate literature review and insight discovery.

Tools and Concepts:

• Python • Google Colab • Scikit-Learn • Streamlit • Hugging Face • OpenAI API
• ChromaDB • LangChain

DELIVERED BY WORLD-CLASS FACULTY

With over 100 years of collective experience in academic leadership, research, and industry application, our faculty brings unmatched expertise to the program. By combining strong theoretical foundations with practical insights, they ensure a learning experience that equips learners with the skills to transition into or advance within one of today's most lucrative and fast-growing career fields.

Dr. Kumar Muthuraman

Faculty Director, Center for Analytics and Transformative Technologies, McCombs School of Business, the University of Texas at Austin.

Dr. Kumar is the H. Timothy (Tim) Harkins Centennial Professor in the Department of Information, Risk, and Operations Management and the Department of Finance at the McCombs School of Business, The University of Texas at Austin. In addition, he serves as the Faculty Director at the Center for Analytics and Transformative Technologies. Before joining the faculty at UT Austin, Dr. Kumar was an assistant professor at Purdue University and a graduate research assistant at Stanford University. He received his Ph.D. and M.S. in Scientific Computing and Computational Mathematics from Stanford University, and his research focuses on decision-making under uncertainty. His application areas of interest include quantitative finance, financial risk management, operations management, healthcare, and energy.

Dr. Daniel A Mitchell

Clinical Assistant Professor, Department of Information, Risk and Operations Management, McCombs School of Business, The University of Texas at Austin.

Dr. Daniel Mitchell is a Clinical Assistant Professor in the Department of Information, Risk, and Operations Management at the McCombs School of Business, The University of Texas at Austin. He received his Ph.D. in Information, Risk, and Operations Management from The University of Texas at Austin. His main research interests focus on financial engineering, specifically applying stochastic control to problems in finance. He has worked on projects in option pricing, algorithmic trading, federal intervention in the interest rate market, and human mortality forecasting.

Dr. Abhinanda Sarkar

Senior Faculty and Director, Academics, Great Learning.

Dr. Abhinanda Sarkar holds B.Stat. and M.Stat. degrees from the Indian Statistical Institute (ISI) and a Ph.D. in Statistics from Stanford University. He was a lecturer at the Massachusetts Institute of Technology (MIT) and a research staff member at IBM. Following this, he spent a decade at General Electric (GE). He has provided committee service for the University Grants Commission (UGC) of the Government of India, for infoDev, a World Bank program, and for the National Association of Software and Services Companies (NASSCOM). He is a recipient of the ISI Alumni Association Medal, an IBM Invention Achievement Award, and the Radhakrishnan Mentor Award from GE India. He is a seasoned academician and has taught at Stanford, ISI Delhi, the Indian Institute of Management (IIM Bangalore), and the Indian Institute of Science. Currently, he is a full-time faculty member at Great Lakes. He is the Associate Dean at the MYRA School of Business, where he teaches courses such as business analytics, data mining, marketing research, and risk management. He is also the co-founder of OmiX Labs, a startup company dedicated to low-cost medical diagnostics and nucleic acid testing.

Dr. Davood Wadi

Assistant Professor, University Canada West.

Dr. Davood Wadi is an Artificial Intelligence Researcher at HEC Montréal, specializing in computer vision, natural language processing, meta-learning, consumer neuroscience, and psychophysiology. His research involves developing new algorithms for deep learning applications, from optimization to domain-specific tasks. Dr. Davood Wadi has an educational background in economics and has worked as a financial analyst, investing in currencies by incorporating mathematical methods into mass psychology.

Dr. Bradford Tuckfield

Co-Founder and Director, Wilson Consulting

Dr. Bradford Tuckfield is a Data Science Consultant at his company, Kmbara, where he provides automated, data-centric solutions in domains such as manufacturing, pharmaceuticals, marketing, and technology. He is also an author and has written books on data science, computer science, and algorithms. In addition, he works as an instructor at ViaX and Great Learning. Dr. Bradford Tuckfield completed his Doctor of Philosophy (Ph.D.) at the Wharton School in Operations and Information Management. He comes from a background in mathematics and economics and has broad expertise in data science, including statistics, programming, and Machine Learning.

Mr. Faraaz Ahmed Sheriff

Sr. Data Scientist, Ontario Ministry of Children, Community and Social Services

Mr. Faraaz is a Data Scientist at the Ontario Ministry of Children, Community, and Social Services, where he contributes to evidence-informed decision-making through advanced analytics. He is part of the Integrated Analytics Exploration Branch, where he leverages cutting-edge techniques to support data-driven initiatives. Throughout his career, Faraaz has worked with numerous Fortune 500 clients across various industries, including retail, consumer packaged goods (CPG), and telecommunications.

Note: This is an indicative list and is subject to change based on the availability of mentors.

CAREER SUPPORT AND SERVICES

The program offers a comprehensive set of career resources and guidance designed to help translate learning into professional advancement.

Career Mentoring Sessions: Get access to two career mentoring sessions with industry experts who have transitioned into AI and Machine Learning roles, and gain guidance on building a rewarding career in the field.

Resume Builder: Access an AI-assisted resume builder to create professional, ATS-optimized resumes aligned with targeted roles.

Mock Interviews: Practice and refine your interview skills with unlimited AI-assisted mock interviews.

Career Preparation Materials: Gain access to curated career preparation resources to support job readiness.

APPLICATION DETAILS

Eligibility

Bachelor's or undergraduate degree with at least 50% aggregate marks or equivalent.
No programming experience is needed.

Application Process

The admission process is conducted on a rolling basis and will be closed once the requisite number of candidates is enrolled.

ABOUT GREAT LEARNING

15 Million+
Learners

170+
Countries

8400+
Experts and Mentors

Great Learning is a leading global ed-tech company for professional and higher education. It offers comprehensive, industry-relevant programs across cutting-edge Technology, Data, and Business domains. These programs are developed in collaboration with the world's foremost academic institutions, such as Johns Hopkins University, MIT Professional Education, The University of Texas at Austin, Northwestern School of Professional Studies, Deakin University, Chicago Booth Executive Education, Great Lakes Institute of Management, and more.

Programs offered by Great Learning are constantly reimagined and revamped to address the dynamic needs of the industry. Offered in blended, classroom, and purely online modes, these programs are delivered with the help of expert mentors and highly qualified faculty. Great Learning is on a mission to enable transformative learning and career success in the digital economy and has impacted 15 million+ learners from over 170 countries.
